

MPS NIGHT SIGHT 6000

CLEAR VIEW IN COMPLETE DARKNESS

The NIGHT SIGHT 6000 configuration provides a clear, wide view of a large area in complete darkness. It has an extremely low light 8MP 180° camera with configurable motion detection to create detection zones that allows adjustable regions of interest. When there is motion in a region, the system will provide a notification.

The Night Sight's primary feature is the 2 high-end 120° LED illuminators to provide a full 180° view of an area of up to 100 feet. The illuminators utilize hot-spot reduction technology and a highly diffused elliptical beam shape that delivers light at a greater illumination distance to deliver superior image quality. The LED illuminators are 850nm wavelength which shows a very light red glow to the human eye. (Optional 940nm no visible light with less distance.) The coverage is even across the 120° dispersion allowing for evenly lit viewing area. Using two IR illuminators provides better highlights and shadows when seen by the IR sensitive camera. The IR lights include an automatic dusk to dawn control.

FEATURES

- 2 IR Illuminators W/ 120° Dispersion
- 8 megapixel panoramic camera, a viewing range of 180° provides a great view.
- Scheduled operation allows you to activate your system during specific hours
- Easy Deployment - mounts on wall or pole
- This is a system is configured for constant power operation
- Cradlepoint Router with Cellular Modem and antennas
- Receive emails/SMS alerts
- Remote Video Access
- Control your system remotely--turn on lights and reset the system.
- MP Status provides the ability to see all of the critical information about your device, remotely control activities, and be notified of any abnormalities.
