

DEFENDER LITE 6000

PROACTIVE SITE PROTECTION

The Defender Lite 6000 is similar to the Defender 6000 except it does not include internal VMS and includes local point-to-point radio system instead of cellular. This configuration is to be used on a site with either a trailer or a VMS base station product to provide recording. The system is an effective, proactive detection and deterrent tool. The MPS Defense System functionality offers the ability to arm and disarm a system or a site. This system can detect activity in the protected area, turn on super bright LED lighting and flash the strobe light. The system will then produce notifications via emails, SMS, and the MPS Defense System cell phone application. When a monitoring service is used, the activity can be investigated with snap shots along with live and historical video, allowing prompt predetermined action to be taken.

KEY FEATURES

- **Lights up the Area** – The two 3600 lumen flood lights provide light around the area for both deterrence and better lighting in dark areas
- **Visibility** – 8 megapixel panoramic camera, 360° viewing range provides a great field of view
- **Detect Activity** – PIR detector to reach out 40+ feet to detect motion in the area (optional 80')
- **Scheduled Operation** – Activate your system during specific hours
- **Deterrent** – Police grade programmable strobes act as a deterrent
- **Deploy** – Mounts on wall or pole
- **Power** – Configured for constant power operation
- **Communicate** – Point-to-Point communications
- **Be Informed** – Receive emails/SMS alerts
- **Remote Video Access** – See live video of the remote location
- **Remote Control** – Remotely turn on lights and reset your system
- **Remote Status** – MP Status provides the ability to see critical information about your device, remotely control activities, and be notified of any abnormalities
